That Meteor

The meteor that was observed here Tuesday night was seen in San Francisco and Sacramento, and was seen as far south as Independence and Bellville. It made the people of Candelaria think the world was coming to an end. The phenomenon which accompanied it indicated that it struck the earth somewhere near the Candelaria neighborhood. When it bursted in **the** sky and disappeared from view it was attended by a queer rumbling noise and a violent shaking of **the** earth. The buildings of Candelaria were shaken **as** if by a violent earthquake and, everything was terribly stirred up. An effort will be made to find the meteor.
